

Capstone Day 3 - Reports, Annotations, and Browser Config Report

Day 3 implements the trainer Day 15 topics on the selected nopCommerce capstone website.

Trainer Topics Covered

Trainer Topic	Capstone Implementation
test.skip	Added skipped product filter scenario.
test.fail	Added expected failure for intentionally wrong title validation.
test.fixme	Added fixme test for a search filter scenario to update later.
test.slow and timeout	Added slow home page test with custom timeout.
test.step	Added step-wise home page report test.
getByRole	Verified nopCommerce login, register, search textbox, and search button by role.
HTML reporter	Configured reporter: html in playwright.config.js.
Trace and screenshot config	Configured trace on retry and screenshot only on failure.
Browser project	Configured Chromium project for capstone execution.

Files Created

File / Folder	Purpose
package.json	Project metadata and Playwright Test dependency.
playwright.config.js	Report, trace, screenshot, and browser project configuration.
tests/annotations.spec.js	Skip, fail, fixme, slow, timeout, and test.step examples.
tests/role-locators.spec.js	Role locator checks on nopCommerce home page.
run_day3.bat	Simple runner file for Day 3 tests.

Tests Performed

- Created skipped test for a future product filter scenario.
- Created expected-failure test for wrong title validation.
- Created fixme test for a scenario planned for later update.
- Created slow test with custom timeout for nopCommerce home page.
- Created test.step based report test for navigation, title check, and search box visibility.
- Created role locator test for login, register, search textbox, and search button.

Execution Result

Day 3 test run completed successfully: 4 passed, 2 skipped, 0 failed. The expected-failure test is intentional and is handled by Playwright.

How To View The Work

- Open the Capstone Day 3 folder to view package.json, playwright.config.js, tests, and this PDF.
- Open playwright-report folder after execution to view the HTML report.
- Review annotations.spec.js to see skip, fail, fixme, slow, timeout, and test.step usage.
