

Capstone Day 1 - Playwright Basics Report

Implementation of the trainer first Playwright day on the selected capstone website: nopCommerce demo store.

Trainer Day 12 To Capstone Day 1 Checklist

Trainer Day 12 Step	Capstone Day 1 Implementation	Status
Import chromium from Playwright	<code>const { chromium } = require('playwright');</code>	Done
Use async immediately invoked function	<code>(async () => { ... })();</code>	Done
Launch browser	<code>chromium.launch({ headless: false })</code>	Done
Open new page	<code>browser.newPage()</code>	Done
Open website	<code>page.goto("https://demo.nopcommerce.com/")</code>	Done
Print title	<code>console.log(await page.title())</code>	Done
Wait 5 seconds	<code>page.waitForTimeout(5000)</code>	Done
Close browser	<code>browser.close()</code>	Done

Important Confirmation

All actions taught by the trainer on the first Playwright day are implemented in Capstone Day 1. The only change is the website URL: the trainer used Google for practice, and the capstone uses `https://demo.nopcommerce.com/`.

Files In Day 1 Folder

File / Folder	Purpose
test.js	Main Playwright Day 1 script.
package.json	Project metadata, Playwright dependency, and npm run day1 command.
package-lock.json	Dependency lock file generated by npm install.
node_modules	Installed Playwright package files.
run_day1.bat	Double-click file to run Day 1 script without typing commands.
Day_1_Playwright_Basics_Report.pdf	This report explaining Day 1 implementation and how to run it.

Main test.js Code

```
const { chromium } = require('playwright');

(async () => {

  // Launch browser
  const browser = await chromium.launch({
    headless: false
  });
  // Open new page
```

```
const page = await browser.newPage();

// Open website
await page.goto('https://demo.nopcommerce.com/');

// Print title
console.log(await page.title());

// Wait 5 seconds
await page.waitForTimeout(5000);

// Close browser
await browser.close();

})();
```

How To Run / See Day 1 Work

Option 1: Run by double-clicking

- 1 Open the Day 1 folder and double-click run_day1.bat.

Option 2: Run from terminal

- 1 Open PowerShell or VS Code terminal.
- 2 Type exactly: cd "D:\WIPRO\Capstone_Project\Capstone Day 1 - Playwright Basics"
- 3 If node_modules folder is not present, type exactly: npm install
- 4 Do not type the words "if node_modules is missing" in the terminal. That is only an instruction.
- 5 Type exactly: npm run day1
- 6 Chromium will open, the nopCommerce website will load, the page title will print in terminal, the script will wait 5 seconds, and the browser will close.

Common Mistake

Incorrect command: npm install if node_modules is missing

Correct command: npm install

Reason: npm reads every word after npm install as a package name. So it tries to install packages named if, node_modules, is, and missing, which creates the error.

Execution Note

The script was run successfully. At execution time the public website printed the title "Just a moment..." because the site showed a temporary security/loading page. The Day 1 Playwright flow still executed completely.
